910 Kitchen Video System

Panasonic – helping you efficiently manage order preparation, packing and tracking.

Panasonic's 910 Kitchen Video System (KVS) is an instrumental tool for your front counter, drive-thru and kitchen operations. Designed to complement the transaction and information processing of Panasonic Point of Sale Systems, KVS helps you improve order accuracy, speed of service, and ultimately – customer satisfaction.

Customizable

Panasonic's 910 KVS offers extreme flexibility, allowing you to customize your video system specifically for the unique needs of your operation.

- Route orders to specific monitors based on any number of criteria such as origin (front counter or drive-thru), menu item, quantity of active orders and/or quantity of items in the order.
- Dictate how many orders you would like to show per monitor, either 4 or 8, depending on the average order size and/or the amount of preparation detail you require. Either option allows you to wrap orders onto an additional monitor, if you desire.
- Display orders by destination (eat-in, carry-out or drive-thru) using the split-screen option, allowing staff to quickly distinguish preparation and packing needs.
- Tailor your display presentation to draw attention to important scenarios, such as order changes, voided items, cancelled orders, and more. Situations can be called out using colors, blinking/flash, reverse video, and more.
- Specify how you would like your items to appear on the monitor, one at a time or as a whole order, whatever you prefer.

Innovative

The new Panasonic KVS system offers the latest technological advances to help add efficiencies and streamline your operation.

- Each Panasonic KVS box offers 2 channels with an additional port allowing you to add a monitor to mirror an existing channel.
- Add additional KVS boxes and expand your capabilities up to 18 channels! Plus, you can have additional mirrored monitors.
- Improve your infrastructure by eliminating the clutter of long cables and connectors. Each KVS box can be mounted near monitors and networked to a central location.

- Reduce onsite service costs with the Panasonic KVS. An end-user replaceable compact flash (CF) card allows you to easily maintain your KVS without the assistance of onsite service technicians.
- Operate the Panasonic 910 KVS box using standard VGA/SVGA or flat panel monitors.

Smart

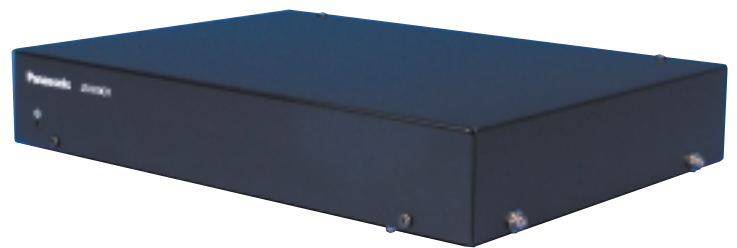

Panasonic's KVS allows you to analyze your operations using various reports to help decrease waste, increase efficiency and control food costs.

- Be prepared with the KVS Product Projection display, helping you anticipate how much product and/or product preparation you will need for a certain day-part on any given day. For instance, determine the average number of hamburgers that were sold the last four Saturdays between 11 am and 2 pm.
- Improve your speed of service (SOS) by reviewing the Panasonic KVS SOS reports, which detail the times associated with completing an order. Review each step of the order completion process to uncover and correct inefficiencies.

Versatile

Panasonic's 910 KVS offers the flexibility to implement special display modes for various situations. Display modes are integrated directly into your KVS and can be utilized whenever you need them.

- Manage your drive-thru more effectively with Park/Serve Mode. Park/Serve Mode allows you to indicate which order is Parked and in need of special attention, and which orders can be prepared as normal.
- Prepare multiple orders at once using Summary Mode. With Summary Mode you can consolidate menu items by the total quantity in the system, rather than by individual order. For instance, you can see that there are a total of 20 hamburgers in the system over multiple orders, allowing you to focus on the preparation of particular menu items, instead of individual orders.
